

THE ALARM CENTER® FOR WINDOWS®

MULTI USER

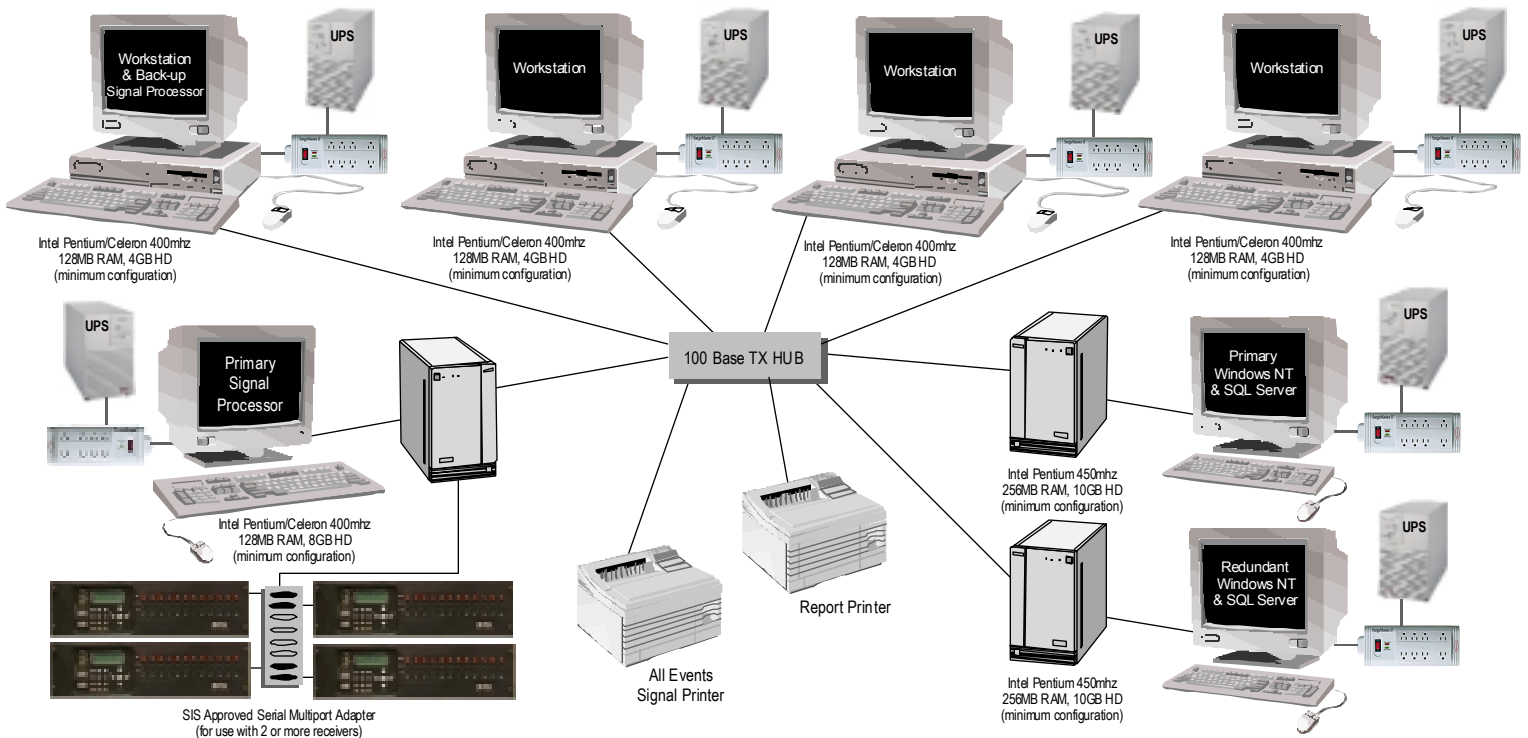

MONITORING/DISPATCH MODULE

Our flagship product, the Monitoring/Dispatch Module is re-engineered under the Windows® platform. It is designed to automate signal traffic from as many as 256 digital and radio alarm receivers simultaneously. Emergency signals are automatically displayed to the operator workstation for quick and simple resolution. Non-emergency signals are processed by the System without the need for operator intervention. Off-site personnel can even be alerted to special conditions via a pager, fax and e-mail.

The multi user network version of the *ALARM CENTER*® Monitoring/Dispatch Module is for the advanced central station environment. By utilizing the Windows NT® platform and SQL database structures, the System is designed for growth, speed and piece of mind knowing that your central is operating on the most advanced platform available today. The System is capable of handling as many workstations as needed for simultaneous dispatching, data entry, account maintenance, reporting or any other administrative purpose.

The multi user network version of the *ALARM CENTER*® Monitoring/Dispatch Module can be further enhanced by the addition of any of the following popular options (please see "Software Products" specification sheet for further information):

TELEPHONE ACCESS MODULE • DEALER ACCESS MODULE • MAPPING MODULE • GLOBAL POSITIONING MODULE
ACCOUNTING INTERFACE MODULE • SERVICE MANAGER MODULE • BADGING MODULE
