

THE ALARM CENTER® FOR WINDOWS®

VIDEO MODULE

MONITORING/DISPATCH MODULE

Our flagship product, the Monitoring/Dispatch Module is re-engineered under the Windows® platform. It is designed to automate signal traffic from as many as 256 digital and radio alarm receivers simultaneously. Emergency signals are automatically displayed to the operator workstation for quick and simple resolution. Non-emergency signals are processed by the System without the need for operator intervention. Off-site personnel can even be alerted to special conditions via a pager and e-mail.

The Video Integration Module can be integrated with the single, mini-network and multi user versions of the *ALARM CENTER*® Monitoring/Dispatch Module. The Video Integration Module will allow LIVE video to be displayed for each zone violated during a dispatch. LIVE video will streamline alarm processing and reduce false alarm dispatching.

The *ALARM CENTER*® Monitoring/Dispatch Module can be further enhanced by the addition of any of the following popular options (please see "Software Products" specification sheet for further information):

TELEPHONE ACCESS MODULE • MAPPING MODULE • GLOBAL POSITIONING MODULE
ACCOUNTING INTERFACE MODULE • SERVICE MANAGER MODULE • BADGING MODULE

The screenshot displays the ALARM CENTER Monitoring/Dispatch Module interface. It features a main window with several sections: a top menu bar, a signal processor status bar, and a main content area. The main content area is divided into several panes. On the left, there is a pane for account details, including fields for Account, Name, Address, City, State, and Zip Code. In the center, there is a pane for signal information, including fields for Signal, Zone, Date, and Time. On the right, there is a pane for signal log history, showing a table with columns for Time, Location, and Action. At the bottom, there is a pane for zone selection, showing a list of zones with checkboxes. A small window in the bottom right corner displays a live video feed from a selected zone, showing a person in a dark jacket and hat walking in a hallway.

Important subscriber data remains displayed throughout the dispatch

Select any tab to display additional information

Quick access icons for specific information pertaining to this account

The tripped zones can be selected for LIVE video display

The current signal information is displayed here and is color coded for quick recognition

LIVE continuous video feed from selected zone

SYSTEM REQUIREMENTS: In addition to the hardware requirements to operate the *ALARM CENTER*® Monitoring/Dispatch Module, CCTV equipment capable of TCP/IP protocol accessed via a web browser interface and a static IP address are required. Contact your Account Executive for more information on supported equipment.
