

THE ALARM CENTER® FOR WINDOWS®

SAMPLE SCREENS

MONITORING/DISPATCH MODULE

Probably the best way of evaluating a software system, short of using it, is viewing the screens.

- Is the proper data on the screen for the operator?
- Is the data displayed in a logical manner which is easy to work with?
- Does the System have the features necessary to operate the central efficiently?

These screens are just a small sampling. They are intended to provide you with a “feel” for the System. Please study these screens carefully. They were developed by working side-by-side with your industry colleagues and are based upon the proven track record of our previous systems. Compare them with your current system or others that you are evaluating. We are confident that you will agree, the *ALARM CENTER*® is “superior by design”.

THE MAIN DISPATCH SCREEN

Important subscriber data remains displayed throughout the dispatch

Select any tab to display additional information

Quick access icons for specific information pertaining to this account

The tripped zones can be selected for further detail

The current signal information is displayed here and is color coded for quick recognition

Call responsible parties by simply clicking here

A complete and detailed log of all activity on this signal is displayed throughout the dispatch

THE ALARM CENTER® FOR WINDOWS®

SAMPLE SCREENS

MONITORING/DISPATCH MODULE

THE TRAFFIC SCREEN

Select Auto Mode to automatically dispatch signals based on priority to the next available dispatcher, or manually select the signal to dispatch

All pending signals are displayed based on priority, date & time order

Signals are color coded for quick recognition

If a signal is placed on hold, the time and operator are automatically indicated

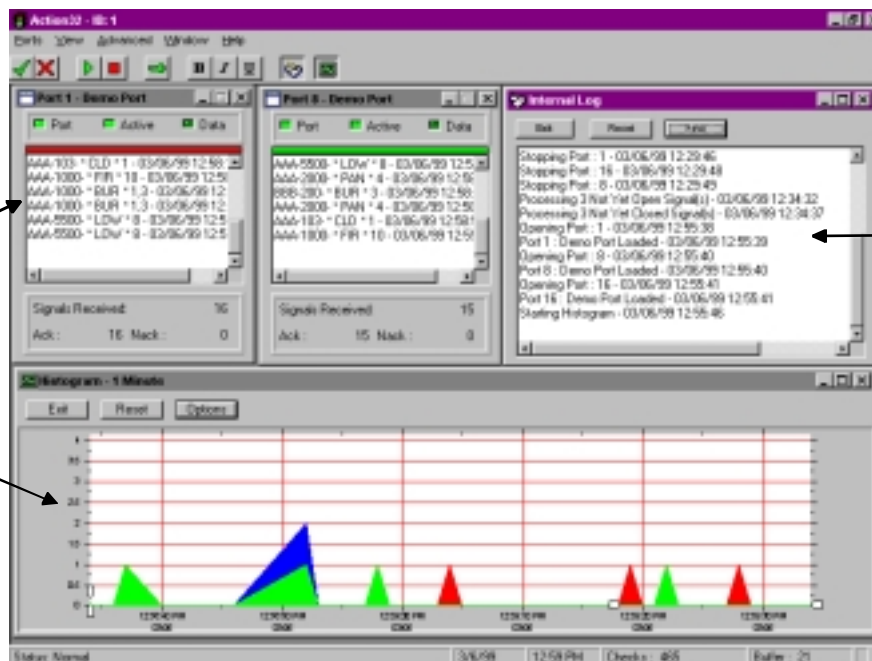

At all times, on every screen, the number of signals pending and on hold are displayed, the left portion of the line is used for contact sensitive help messages

THE RECEIVER CONTROL PANEL SCREEN

Here is where each receiver is configured, as many as 256 receivers can be used simultaneously

A visual tape of received signals is maintained

A moving graphical display of the signal traffic received, the graph window can be set to display signals from one minute to 24 hours

All internal system events can be monitored, system generated activity such as open/close & restoral checks are displayed

As with all screens, these may be resized and organized to individual central station requirements
